INNOVATIVE AUTOMOTIVE EQUIPMENT

Bleedpro 50 Pressure Bleeder

Excellent Performance in a Small Unit.

An entry level Pressure Bleeder packed with features!

Does a portable, easily carried around unit appeal to you? Are you involved in mobile mechanical work? The Bleedpro 50 is for you!

Working off any 12 volt power source, without air pressure, this machine can be taken anywhere. The Bleedpro 50 has an adjustable operating pressure of 0.4-2.5 bar, with both continuous or pulsating modes. A built in micron filter prevents moisture entering the new brake fluid in the 5L reservoir.

Bleedpro 100 Pressure Bleeder

Fast, Easy Brake Bleeding for All Vehicles.

A top of the range pressure bleeder for the busy mechanical workshop!

Incorporating all the innovative features of the Bleedpro 50, the Bleedpro 100 has the added benefit of the pulsating mode operating at all pressure settings, not just at full pressure.

Easily wheeled around your workshop, this machine can substantially reduce the time needed to bleed vehicles. It comes with a long 4 metre hose, a 10 litre fluid reservoir standard on this machine, and fitted of course with the built in micron filter preventing moisture contaminating the brake fluid.
